# AmigaOS 4.1

AmigaOS 4.1

Remember when computing was fun?

Features:

- Intelligent memory paging
- Hardware compositing engine (Radeon R1xx and R2xx family)
- Implementation of the "Cairo" device-independent 2D rendering library
- Picture Transfer Protocol (PTP) support for greater digital camera compatibility
- JXFS filesystem with the support for drivers and partitions of multiple terabyte size
- Improved Workbench functionality
- New and improved DOS functionality (full 64 bit support, universal notification support, automatic expunge and reload of updated disk resources)
- Improved 3D hardware accelerated screen-dragging
- Reworked AmiDock with true transparency
- Reworked Warp3D Radeon drivers with new functionality
- And much, much more.
